A Yes, we welcome sample order to test and check quality. Mixed samples are acceptable. Q 2. What is the lead time. ASample needs 13 days, mass production time needs 1015 days for order less than

10000 pcs. Q 3. Do you have any MOQ limit. A Our MOQ EXW is 100 pcs under neutral gift box; MOQ FOB is 1000pcs. MOQ for OEM is 2000PCS. Q 4. How do you ship the goods and how long does it take arrive. A General we ship samples by DHL, UPS, FedEx or TNT. It usually takes 34 days to arrive. A Firstly, we will prepare artwork for visual confirmation, if the color and position are alright, we would make sampling first from silk print factory and take picture for your second confirmation before mass production. Q 6. Do you offer guarantee for the products. A Yes, we offer one year guarantee for the products. Q 7. Do you accept drop shipping. A Yes, it's available. Q 8. If products have problem or don't work, what can we do. A First please read manual, there have many indication on it, if you can not solve the problem after reading, you can send email to QC engineer, our engineer Mr Alan have 15 years experiences to answer your all problem. We thought it was in a pretty good area with quiet neighbors. After this recent experience, I can say that I'm a big fan of generic security systems from China. I know, Chinese products don't have an awesome reputation, and I think these systems are worth it. Way worth it!! Ask your local police department if they will respond to an automated call from an alarm system. Consider having the alarm call your cell phone or send a text message. This can help you rule out false alarms first. Remember that security companies must call you first before they can call the police. With infrared motion detectors, you can use fewer entry sensors. Entry sensors are recommended for all doors and windows that are accessible from the ground or a deck as well as windows that are protected by motion detectors.

I have a small home that's less than 800 square feet, but I found that most of the packages were way too big or too limited. I ended up purchasing a larger kit than I wanted because the price was lower than some of the more limited bundles. Wireless security systems can make calls via a land line PSTN, a cell connection with a GSM SIM card this is the type that I bought or WiFi these are considerably more expensive and most have GSM backup anyway. Many models have dual connectivity, such as WiFi and SIM card or PSTN and GSM. Early termination fees do apply for contract plans. I looked at dozens of systems and had a hard time finding the right one. I didn't think that I needed 8 entry sensors, but this large package was a better value than some of the more stylish and smaller kits. You'll see that some of the systems use the same base but have a different siren and other slightly different accessories. This one is exactly the same. I highly recommend it, and I'm pretty sure that it comes with the same unforgivably pathetic user manual! Buy Now As most customers point out, the English translations in the manual are pretty much worthless. The best section of the pamphlet is the last page where there is a table that shows all of the programming codes. This will power up the display. If the alarm is triggered, the base unit will tell you which zone was activated, so your sensors should be numbered in some type of logical order. I used a piece of masking tape, but you could also use a sticker or simply write on the back with a Sharpie. This key combination will be used each time that you program a sensor or change a setting. Then, type 23 followed by the sensor number. The lowest number is 02 and the highest number is 99. Look for dashes on the screen, and enter your instructions. Here the base is detecting sensor 10. I pried the back off with a flathead screw since it was really on there. Mine did not have this feature either way, you can follow these steps.

<http://geemarco.com/images/brother-sewing-machine-manual-es-2000.pdf>

There is also a mute icon, which activates your at-home alarm settings. In this mode interior sensors, such as PIRs, won't trigger the alarm. When you return to the main display, it should show the correct date and time. Attaching one wired speaker is pretty easy too. If you've ever put together a stereo, this is about the same. The wire won't go all the way in, so don't worry about it. Other terminals can be used to connect wired sensors. This is the best video that I've seen for setting up this type of alarm system. These instructions will make it much easier to program the various sensors, and it will help you decipher the user manual to complete more advanced settings. If your

smoke alarm goes off, you don't want to receive a regular alarm notice. Defining the alarm types tells you exactly what's going on at home. An icon will also pop up on the display if one of these alarm types is activated. These system supports these options. Naturally, you don't want the alarm going off every time your spouse has a midnight snack. The default is to activate any time that motion or activity is detected. Each wireless sensor can be programmed independently based on the following siren codes. To get away from a monitoring company. To monitor for fire, carbon monoxide and other risks. To protect my home from burglars. To get a discount on my home insurance. See results The system will let you know that programming is complete. My concern is what is the minimum digits of a phone number if any.

Thanks in advance So on the Remote Controller press the home button it's got a lightning sign on it. The host shows Home but the PIRs set off the alarm. What am I doing wrong Help. Works fine in away alarm. I also have a YALE alarm. You can walk test this one. Can't see an instruction to do this on the GSM, but when in disarm and you activate a P.I.R. the host flashes a red light on the SET indicator. My system is going off at random with the fault code 01 What is 01 As I have only programmed 02 and above Is there a code for the wired siren. Can you supply or inform me of a supplier of a manual in English I will understand Thanks. Address. 58 Glebe Road Whitburn West Lothian EH47 0AZ Thanks in advance! Also does anyone have a manual in proper English for this alarm please. Many Thanks, Gerard. There are three options for each sensor. 1. Alert all the time 2. Alert when at home 3. Alert when away There's a fourth option to never alert, but that doesn't make sense. I will update my directions to provide this info. Thank you so much for commenting. I appreciate your interest, and I'm sorry that I wasn't notified of your comment sooner. Thank you both for commenting. I'm sorry that I didn't see your messages sooner. So I don't believe that it chirps like some home alarms do. I don't think that you can change the default language. Maybe you can exchange it if the seller sent you the wrong item. Help please Is there a code for the wired siren. Do you know under which condition this voice recording is heard after host sounds alarm. When the unit call the preset numbers will it announce the voice recording message You need to purchase a separate wireless glass break sensor. These basic sensors that I have are magnetic, so they only trigger the siren when the magnets move apart on your window or door. I decided that I didn't need that function since a burglar would most likely open the door to move anything out. It should be easy to program and add the glass sensor. Good luck!

To calculate the overall star rating and percentage breakdown by star, we don't use a simple average. Instead, our system considers things like how recent a review is and if the reviewer bought the item on Amazon. It also analyzes reviews to verify trustworthiness. Please try again later. Sailen 4.0 out of 5 stars Overall I really like the alarm and Im going to keep it. The motion detectors light up every time someone moves while the system is disarmed. Ive only been testing it for a couple days, and I imagine this depends on your GSM provider too. I used this one My wife asked me to install a security system. I don't want to spend a lot of money for ADT system with monthly fees so I chose this GSM alarm system. The installation is fairly easy. I like the idea of double sided tapes for sensors. I turned the alarm system on and opened the door for testing. The siren was triggered right away and it's loud. Hopefully it's good enough to scare burglars off.

Four remote controllers are very handy, it's easy to use them to turn the alarm on and off. By the

way, I also got a small credit on homeowner insurance for installing this security system. But its good for the price. Installed in 20 minutes! This is the first one that came with the sensors programmed to the unit. Wow! Pretty much plug it in connect two wires for the siren and the power cord and it's ready to go. The main reason I bought this set up was the remotes. Other systems I have had come with super cheap remotes that break in a few months of being on a key chain the white plastic ones others sell. The four that come with this kit are metal and much higher quality. I use this in a building that does not have wifi so for me it's all about making noise to scare away burglars. In 20 minutes I had two window sensors, two sensors and two motions detectors installed. Plugged it in and it worked perfect. Thinking about buying another for my house. Plus everything was already synced to the panel, which was great and made it very easy to hook up and have ready for my customers. Update the alarm stop picking up the sensor every time you open the door to the contact you dont see a red light and its not working. I had to buy a new battery and not even had it that long whats going on. The Chinese English is the worst ever, and combined with the complex steps needed to do anything, this has become a very expensive paperweight with a pretty red flashing light. Physical installation is real simple, had a couple of issues with double back tape not holding on first try but that was two out of 26 sensors. Programming is impossible with manual, thank god for YouTube. After two different videos it was working. Se tardo un mes en llegar, la sirena nunca sirvio y cuando la desconecte ya no volvio a sonar el panel, el sonido del panel se escucha distorsionado y de pesima calidad. Un mal producto en general.

No lo puedo devolver ya que no me van a regresar el 100% del dinero y me costo 3,200 pesos. No lo recomiendo, por 2,000 pesos mas instalas una con un vendedor local ya con instalacion y bateria de 48 horas, sirena exterior y todo. Me arrepiento demasiado de esta compra. Voy a terminar gastando mucho mas por ahorrarme unos pesos. Ademas el servicio del vendedor no es bueno, se tarda mucho en contestar y no lo hace con mucho interes de resolver. Sorry, we failed to record your vote. Please try again Algunas funciones extras necesitan que se estudie bien el manual. El dispositivo suena bien, esta en espanol, y los sensores son mas que suficientes para una casa de interes social. Los controles remotos funcionan bien desde el exterior. Sorry, we failed to record your vote. Please try again Sin duda lo volveria a comprar. Lo recomiendo. Sorry, we failed to record your vote. Please try again Sorry, we failed to record your vote.
