Creator Adobe InDesign CC 2014 Windows. One of the best parts of using a Bose Headset is the Bluetooth capability. With Bluetooth, you connect a device by pairing it wirelessly with a source; you do not need a cord to make the connection. Pairing connects other Bluetooth devices with your Bose headset, but first, you must turn on pairing mode. Here is how.

<http://gvshaw.com/images/carburetor-mikuni-manual.pdf>

Manually Turning on Pairing in Your Bose Headset To pair your Bose headset with a Bluetooth-enabled device Turn the headset upside down so that you are looking at the bottom of the headset. Move the power switch to the On position to turn on the headset. Move the headset close to the Bluetooth-enabled device that you want to pair it with so it can be discovered. The second device must also be powered on. Press and hold the call button or another button specified in the instructions for your specific device on your headset for about five seconds to put the headset into discoverable mode. You will see a slow blinking indicator light. From the second devices Bluetooth device list, choose the option for the name of the Bose device you are pairing. If the device name does not up, go back to the Bose device and repeat the steps to get it to show up. After you select the device, you may be prompted to enter a password or to confirm to accept the connection. If you are asked for a password, Bose says to type in 0000 and then press OK. When the pairing has completed the connection, the Bluetooth indicator light flashes again and turns a solid color. Ten seconds after the pairing is complete, the light turns off. Turning on Pairing Mode With Bose Connect App In addition to manually pairing your Bose headset with a Bluetooth-enabled device, you can use the Bose Connect app to turn on pairing mode. The Bose app manages the Bluetooth settings for multiple Bose devices. To pair your Bose headset with the Connect App If you have not already, download the Bose Connect app from the iOS App Store or Google Play. Open the app and go to the Connections section. If this is your first time connecting, click the Connect New option. On your headset, make sure the power light is on and that you held down the Call button to turn on pairing mode. Your device should now show up on the Bose Connect app. Select it by its name.

<http://www.gongoff.com/images/cardale-autoglide-manual.pdf>

Once the device is connected, the indicator light blinks for two seconds, and the app reports that it is Connected to Name of the Device. If you need to disconnect your device, you can do so from the app, and if you choose to reconnect it later, locate your devices name in the app under the Connections subcategory History. There, devices that were previously connected are available to reconnect. When Bose Headset Does Not Pair in Connect If your wireless headset does not show up in the Bose Connect app, confirm that the headset is on and try again. If that does not work, reboot the device. You can also try closing and reopening the Connect app, and if you are on Android, enable location services or clear the apps cache to reset the apps settings and, hopefully, fix the problem. Bose QuietComfort 35 Not Pairing Certain headsets, such as the QuietComfort 35 wireless headphones, sometimes have issues struggling to connect. If you find your Bose QuietComfort 35 not pairing, clear the Bluetooth list on both your headset and the Bluetooth devices you are trying to connect with. To clear this pairing list, slide the power switch of the headset to the Bluetooth symbol and hold it for 10 seconds. You should hear Bluetooth Device List Cleared. Then, do the same on the Bluetooth connected device and delete the QuietComfort 35 name from the devices Bluetooth list. That should solve any issues of Bose QuietComfort 35 not pairing. Bose SoundLink Speaker Not Pairing While it is not a headset, you might find that your Bose SoundLink speakers have trouble pairing too. If this happens, reset Bose SoundLink and the Bose SoundLink app. To do so Hold the Mute button down on your SoundLink speakers for 10 seconds until the LED lights flash. Press the Power button to turn the SoundLink back on. Clear the pairing list on both the Bose SoundLink speakers and the Bluetooth device you were trying to connect to.

To reset the Bose SoundLink pairing lists, hold down the Bluetooth button for 10 seconds. A tone sounds when it is done, indicating you cleared all Bluetooth devices from the speakers memory. Try to pair the device again. To make your speakers discoverable, hold down the Bluetooth button for three seconds. This light blinks on and off about once per second, which is how you know that pairing mode is on. Now, connect to the speakers from your Bluetooth-enabled device, and your device should be paired.
